

Prod test — the discount ship, live on banco.lapiazza.app

Confirms the 2026-07-13 discount ship: the member's earned tier + the cashier's manual discount are two separate lanes, the **15 / 70 / 100** role ladder, the safety floor, and the fat-finger target auto-clamp. Tick as you go; read me the row numbers + PASS/FAIL and I log them.

How to report: either fill this on screen and [Print → PDF](#), or just message me “**row 6 fail** — ...”. Fill in **before** printing (a browser PDF freezes the fields).

THE ONE RULE: the member's tier discount **always applies and shows** (the shop's loyalty promise). The cashier's manual discount **stacks on top**, capped only by their own role: **cashier 15% · manager 70% · owner 100%**. The two **never** combine to take the total below zero — the till can never owe the customer money.

Cast for the test (real prod members): **Walk-in** = no member attached. **Sally420** = SILVER member, **5%** tier (our stand-in for a loyal regular). Log-ins: **Pam** = cashier (15% cap) · **Ralph** = manager (70% cap) · **Felix** = owner (100%). Mobile: if a phone login sticks, hard-refresh once (service worker v100).

#	Do this on PROD	Expected	Pass	Notes
0 · Access				
1	Log in as Pam (cashier) on the till. Open a new sale, add one normal item.	POS loads, item in cart, subtotal shows.	✓	New Sale Tran
1 · The fat-finger guard (walk-in, no member)				
2	No member. Apply a manual 10% discount.	10% comes off, total drops. A cashier's normal rounding room works.	✓	Receipt #TXN-202

#	Do this on PROD	Expected	Pass	Notes
3	Now try to punch in 25% as Pam.	Blocked / capped at 15% — “your max is 15%, ask manager.” She can't exceed her limit.	☒	  New Sale Tran
4	Target-Total mode: on a ~35 item, type a silly low target like CHF 1 , then go to checkout.	It does NOT ring CHF 1. It auto-clamps to Pam's max (15%) and rings a safe price. She can't screw up the price.	☒	  New Sale Tran
2 · Member tier stacks (separate lanes)				
5	New sale, add an item. Attach Sally420 (SILVER). Add no manual discount → checkout.	Her 5% shows and applies automatically (“Member discount SILVER 5%”). She always gets it, and she SEES it.	☒	 Checkout  Sally
6	Same sale, Sally still on. Now Pam adds a manual 10% on top.	BOTH rows show: Member 5% + Discount 10% = 15% off, one receipt. The lanes STACK. (The old bug: nothing came off — now fixed.)	☒	fine
7	The “ George Clooney ”: with Sally attached, Pam adds nothing.	Pam serves her solo — the tier applies on its own, no manager needed. (A higher tier would apply the same way, even above Pam's 15% cap.)	☐	
3 · The manager ladder + the safety floor				
8	Log in as Ralph (manager). Apply a 40% discount (over a cashier's cap, under a manager's).	Applies — a manager can run a big markdown a cashier can't. (Layla clearing the scratched tray, solo.)	☒	 Checkout  Sally
9	Log in as Felix (owner). Attach a member, then pile on a 100% manual discount.	Total floors at CHF 0.00 — NEVER negative, never a refund to the customer. The safety floor holds no matter what.	☒	
4 · The custom-line backdoor (bonus)				

#	Do this on PROD	Expected	Pass	Notes
10	Tap  New item → create an on-the-fly line, e.g. “ Scratch tray, CHF 1 ” → ring it.	Rings at the oddball price you set — the exception escape hatch. (It's recorded with your name + time on the day's tape.)		 Receipt #TXN-202

Overall

☒  Discount model is good on prod ☐  Issues (see notes / rows)
